

Datiphy High Availability Solutions

Datiphy High Availability solutions are designed to support automatic failover to a backup Datiphy Enterprise system to ensure continuous operations in event of unplanned disruption such as power outage, disk failure, or human errors. As Datiphy collects audit data, high availability is an important mechanism to maintain data integrity for future analytics and forensics purposes.

Datiphy High Availability Solutions can be deployed in single site for downtime reduction or multiple sites for Disaster Recovery.

Key Features and Benefits

- ✓ Simple and cost-effective High Availability architecture available for single site or multiple sites
- ✓ Auto failover and fallback with minimal down time
- ✓ Automatic Data Replica and Load Balancing mechanism to manage multiple Datiphy Enterprise Nodes
- ✓ CPU and Storage can be expanded as needed
- ✓ Survive downtime at 99.99% or better availability close to possible
